VCI(Vehicle Communication Interface)

The VCI device works as a vehicle communication interface device, which is used to connect to the vehicle's DLC (Data Link Connector) socket via OBD II extension cable to read the vehicle data and then send it to the tablet via Wi-Fi. It can work with the passenger & commercial vehicles.

It is defined as follows:

1. **Power**: It illuminates solid red when the module is powered on.
2. **Vehicle**: While communicating with the vehicle, the indicator lights up and flashes. Otherwise, it will not illuminate.
3. **BT**: It illuminates when the VCI device is working in wireless BT communication mode.
4. **I/Q**: It lights up when the VCI device is connected to the tablet via data cable.
5. **Wireless**: It illuminates when the VCI device is working in the default WLAN communication mode.

1. Charging & Turning On

Choose any of the followings to charge it:

1. Use the **included power adaptor**: Connect one end of the adaptor to Type-C charging port of the tablet, then connect the other end to the AC outlet.

***Warning:** Please use the included power adaptor to charge the tablet. No responsibility can be assumed for any damage or loss caused as a result of using power adaptors other than the one supplied.

sits on the docking station.

- c). Insert one end of power adaptor into the Type-C charging port of the docking station, then plug the other end into the AC outlet.
3. Press the [POWER] button on the tablet, the system starts initializing and then enters the home screen.

***Note:** If the battery remains unused for a long period of time or the battery is completely discharged, it is normal that the tablet will not power on while being charged. Please charge it for a period of 5 minutes and then turn it on.

2. Network Setup

The tablet has dual built-in wireless communication modules. One is used to communicate with the VCI device, and the other allows the tablet to get online. Once you're online, you can register your tool, update the diagnostic software & APK, surf the Internet and send email on your network.

If the VCI device is successfully activated, the tablet will automatically obtain the VCI ID and connect to it. In this case it is not necessary for the user to manually configure it again. Hence user only needs to set the WLAN connection.

*Note: For details on how to activate the VCI device, refer to **Section 3. Register & Update**.

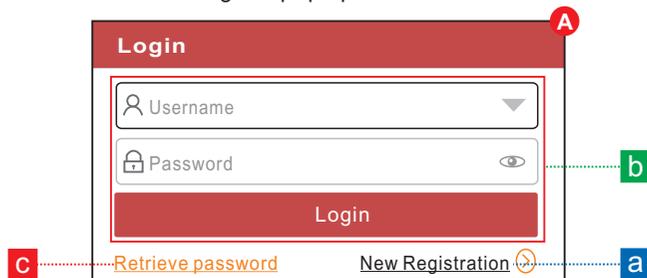

Follow the steps below to proceed:

1. On the home screen, select **Tablet Settings -> WLAN**.
2. Slide the WLAN switch to ON, the tablet will start searching for all available wireless networks.
3. Select a wireless network:
 - If the chosen network is open the tablet will connect automatically.
 - If the selected network is encrypted a network password will need to be entered.

*Note: Once WLAN is set as ON, the tablet will consume more power. While it keeps unused, please set it off to save power. While WLAN is not in use, please turn it off to conserve battery power.

3. Register & Update

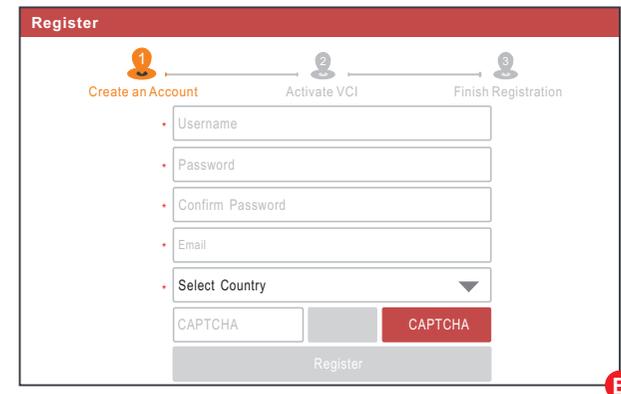

1. **Launch App:** On the home screen, tap "Login" on the upper right corner of the screen, a dialog box similar to the following will pop up on the screen.

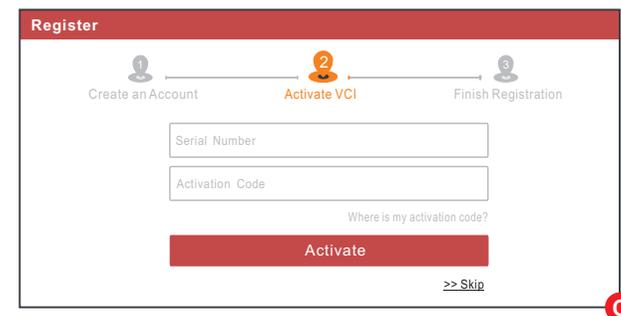

- a. If you are a new user, tap on "New Registration" to start your sign-up. Refer to Steps 2-4.
- b. If you have registered to be a member, type in the username and password and tap on "Login" directly.
- c. If you forgot the password, tap on "Retrieve password" to set a new password.

3. Register & Update (Cont.)

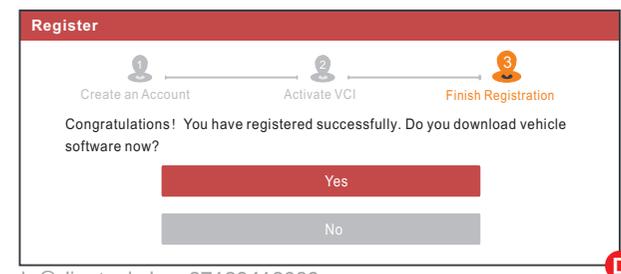

2. **Create an App Account:** Tap on "New Registration" in Figure A, input the information (items with * must be filled) and then tap on "Register". Refer to Figure B.

3. **Activate VCI Connector:** Input the Product S/N and Activation Code (can be obtained from the Private & Confidential Sheet), and then tap on "Activate". Refer to Figure C.

4. **Finish Registration:** To download the diagnostic software, tap on "Yes" to navigate to the download page. Tap on "No" to download and install it later. On the download page, tap on "Update" to start downloading until it is complete.

4. Vehicle Connection

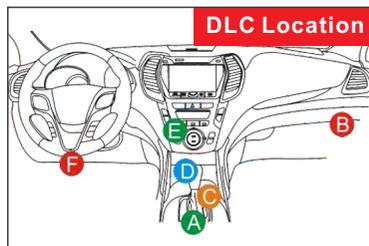

1. Locate Vehicle's DLC

The DLC (Data Link Connector) is typically a connector where diagnostic code readers interface with the vehicle's on-board computer.

For passenger cars, it is usually located on driver's side, about 12 inches away from the center of dashboard. For potential DLC location of most vehicles, see Figure **DLC Location**.

For commercial vehicles, it is generally located in the driver's cab.

If the DLC cannot be found, refer to the vehicle's service manual for the exact location.

2. Vehicle Connection

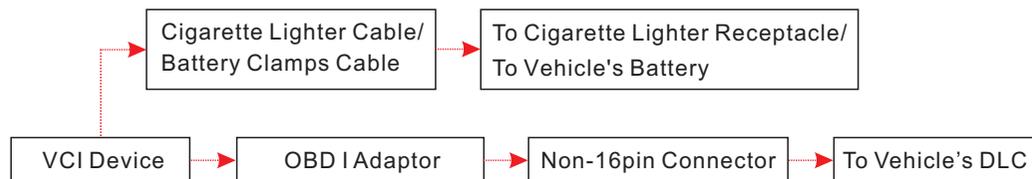

1). OBD II Vehicle Connection

Connect one end of the OBD II extension cable to the OBD-16 connector, and the other end to the vehicle's OBD II DLC.

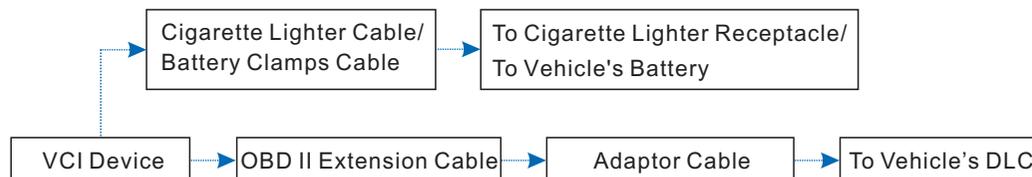

2). Non-OBD II Vehicle Connection

If the power supply on vehicle diagnostic socket is insufficient or the power pin is damaged, you can get power in the following ways:

A. For Passenger Cars:

B. For Commercial Vehicles:

5. Start Diagnostics

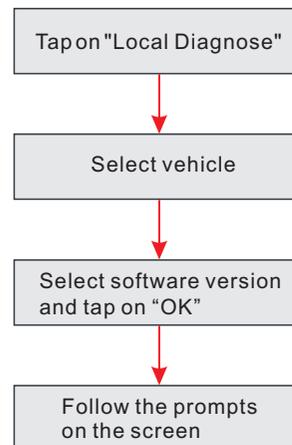

There are three kinds of diagnosis approaches available on the tablet: Intelligent Diagnosis, Manual Diagnosis and Remote Diagnosis.

Intelligent Diagnosis:

Through simple wireless communication between the tablet and VCI device, you can easily get the VIN (Vehicle Identification Number) information of the currently identified vehicle. Once the VIN is successfully identified, the system will retrieve it from the remote server and then guide you to vehicle information page without the necessity of step-by-step manual menu selection. *Note: This method only applies to the passenger vehicles.

Manual Diagnosis:

In this mode, you have to diagnose a vehicle by performing the menu-driven command manually. For new users, please follow the operation chart shown below to get familiar with and start using this tool.

Preparation

Before diagnosing a vehicle, please make sure the following:

- ✓ Switch the ignition on.
- ✓ Vehicle battery voltage range should be 11V ~ 14V or 18V ~ 30V.
- ✓ Throttle should be in a closed position.

*Note: To enjoy more capabilities and functions, you are suggested to check for updates on a frequent basis and keep synchronized with the latest available software.

Remote Diagnosis:

This option aims to help repair shops or professional technicians launch instant messaging and remote diagnosis, making the repair job getting fixed faster.

For more detailed operations, please refer to the User Manual.
